

This command used to create the react project file.

```
npx create-react-app myfirstreactproject
```

File Name

Command used to change the directory(Location) in Terminal

```
cd myfirstreactproject
```

File Name

To Run the Project **npm start**

Node modules means packages that are installed are stored in this.

In public we will store Images, Videos, etc...

```
import logo from './logo.svg';
import './App.css';

function App() {
  return (
    <div className="App">
      <header className="App-header">
        <img src={logo} className="App-logo" alt="logo" />
        <p>
          Edit <code>src/App.js</code> and save to reload.
        </p>
        <a
          className="App-link"
          href="https://reactjs.org"
          target="_blank"
          rel="noopener noreferrer"
        >
          Learn React
        </a>
      </header>
    </div>
  );
}

export default App;
```

Importing of the Packages
